DBMS LAB — EXPERIMENT 03

SQL Queries and Aggregate Functions

Note: These are expected/representative outputs based on the described SQL and sample data, not screenshots from a live MySQL run. Exact formatting and EXPLAIN plans can vary by MySQL version.

Output 1: Employee table

SELECT * FROM Employee returns 30 records. Sample rows:

Emp_ID	Emp_Name	Salary	Dept_ID	Project_ID
1	Aarav Sharma	45000	1	107
2	Ananya Gupta	52000	1	107
3	Riya Verma	48000	1	107
…	…	…	…	…
30	Isha Kapoor	85000	5	103

Output 2: Aggregate salary summary

COUNT(*)	SUM(Salary)	AVG(Salary)	MAX(Salary)	MIN(Salary)
30	2,280,000	76,000.00	110,000	45,000

Output 3: Employees earning more than 80,000

Emp_ID	Emp_Name	Salary
7	Neha Sharma	82,000
8	Aditya Singh	95,000
9	Simran Kaur	88,000
10	Vivek Gupta	105,000
12	Rohan Verma	92,000
15	Mohit Agarwal	85,000
17	Nikhil Jain	90,000
25	Kabir Sharma	95,000
26	Meera Gupta	88,000
27	Varun Singh	92,000
28	Aditi Verma	110,000
29	Harsh Jain	98,000
30	Isha Kapoor	85,000

Output 4: Department-wise count and average salary

Dept_ID	Employee_Count	Average_Salary
1	5	52,000.00
2	7	87,857.14
3	6	73,666.67
4	6	68,500.00
5	6	94,666.67

Output 5: Employee count by project

Project_Name	Employee_Count
Payroll Management	11
Market Research System	6
AI Chatbot	4
Data Analytics Platform	3
Cyber Security System	2
Website Development	2
Mobile Application	1
Cloud Migration	1
